iSign Digital Signage and Queuing Systems

Digital Signage Queuing System

Queuing system is widely used in retail, hospital, and banks with traditional LED displayed the waiting number. JTJTi introduces new implementation "Queuing System" that replace the LED by the digital signage. Not only the waiting number, but also the advertisement, news, and real-time information can be shown on the digital signage display. JTJTi also provide iSign AdMinistrator management software to transfer the data into graphics and show the real time message on the digital signage display.
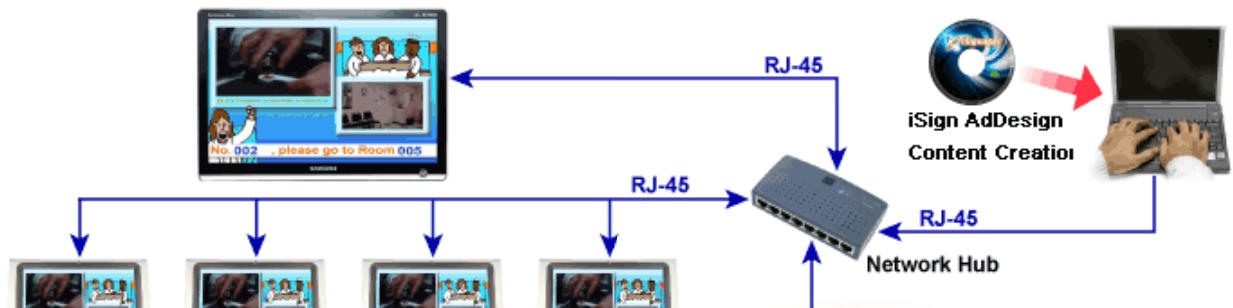

Functions

- Digital Signage Display
- Counter Operator Calling Service
- Counter Manager Control System
- Counter Operator Performance Management System

Demonstration Video

Implementation
